

A-3541 CONTROL ARMS

These control arms are bored to the original Ford specification of .311/312" which may be too small if the spark and gas rods they are being installed on are on the high side of the Ford specification which was .310/.314" or if your rods are plated at the bottom. Originally the spark and gas rods were only plated at the handle end. You can open up the control arm hole with a letter size "O" drill bit or dress the OD of the spark/gas rods down slightly where these install.
